

# Creation Chip Actions

## ☆☆☆ Light Box[Screen] ☆☆☆

### Introduction

Creation Chips' Screen Light Box sets are unique and there is nothing like unto them to compare to. These Screen Box hole sets are the beginner or beginning packages that are essential and needful for you to grow forward into 'Photo Screens'. Ultimately you may want to master 'Photo Screens' which graduate to our 'PhD' level of 9 layer color imaging and manipulation. Realize and understand that 'Photo Screens' are 'brand new' for everyone.

Currently our Screen Light Boxes are in two sets. There is the Four Hole Screen set and there is the Nine Hole Screen set. The Four Hole set is our Basic Prime Hole Screen set and the Nine Hole set is our Advanced Prime Hole Screen set that is needed to function along side with our Intermediate and Advanced packages of 'Photo Screens'.

The Light Box is a stack or set of balanced hard 'Prime' pixelated screens. The Four Screen Light Box has 4 layers of screens each different and each screen is needed on the stack to fill in or to fulfill the entire hole stack. This is the same with the Nine Hole Screen Stack but it has nine hard 'Prime' pixelated screen layers to fill in or to fulfill the entire hole stack.

Since each screen on the stack is different and set apart from the others then any 2 screens on the stack may be combined and merged to make a new screen. Any 3 combination of screens may be combined to make a new screen or any 4 combinations or 5, 6, 7, 8, or 9 combinations. Our Four Screen Light Box set is basic and has 14 different overall screen combinations. Our Nine Hole Screen Light Box set is advanced and it has 510 different screen combinations. These 510 screen combinations are all of the combinations possible that there are in nine layers. The screen layers on the Four Hole Screen Stack are 'Prime' or pure unique perfectly balanced screens and they are different than the also 'Prime' or pure unique perfectly balanced layers on the Nine Hole Screen Stack. This is meaning or it is giving an understanding that the addition of one layer from the Four Hole Screen Stack can be laid or pasted and merged upon all 510 layer combinations of the Nine Hole Screen Stack thus creating 510 more new screen designs or patterns that are different. And add again that each screen layer on the Four Hole Screen Stack can and may also be cut into and then out of each 510 layer combinations of the Nine Screen Stack thus creating at least 510 more new screen designs or patterns.

Understand too that our actions are refined and they will 'make' for you the Four or Nine Hole Screen Light Box layered stack and this is all done for you by the basic push of a 'Play selection' button. Afterwards then the stack may be saved. Following at anytime you may reopen the stack and then abstract or make the different screen combinations from the open stack. The original stack must be unaltered and opened in Build to use our actions for to 'make' all the various screen combinations correctly. The merged screen combinations are titled on the screen image document when it is made or processed by the action thus making the new screen image combination that is made easily saveable to a Same/Same folder. Do not underestimate the yet unknown value of our screens or of our perfectly balanced screen designs because they will catch you by surprise when you are not meaningfully evolving.

Envision our Four Hole Screen Stack as our Prime Imaging DNA Code Strand or Standard. We have many manipulator actions that will process upon these screens and screen stacks. Some are about changing the screens' color or its' pixel size and other manipulator actions are 'Photo Screen' actions which increases your abilities in layer understanding and increases knowledge in color separations. These are explained in the 'Photo Screen' package or action set. Photo Screens are the highest level of imaging mastery that you can achieve to and they require that you have and 'know' all the basics well as a skill. Making 'Photo Screens' require that you know what you are doing and require that you have knowledge and a purpose and you pre-conclude what your end results will likely be. These are Master Actions of surgical type operations that we have also made easy as pushing a button. Just pushing a button with these actions though do not improve your skills here. Understanding screen layer color and its' properties manipulation and the effects that these causes in the overall produced image is what increases your evolve skills in these type of actions.

You will soon see that our Four Hole perfectly balanced screens and 'Photo Screens'

are far superior over all imaging techniques that are in the market today, and our actions process you the highest quality professional photographic masterpieces there are. We stand upon this claim and have proof with faultless action processors that do not flaw and these actions have the potential now to make you the most beautiful designs there can be.

Our basic Four Hole Screen set has four 'black' transparent screen layers and so the Nine Hole Screen set has nine 'black' transparent screen layers. The black screen layers may be changed to colors and hues and white.

The purpose of the screen stack is to use it after making the color separations from any multicolored photograph. The color separations made from the photograph are each cut into a layer on the screen stack. Following this the screen layers on the screen stack are merged into a single layer image. This merged single layer image is seamlessly done made and you cannot find the likes of it anywhere.

As the layers of screens evolve or progress up to nine screen layers deep in color then you can see the depth and power in our unique screens and actions. After much practice you can then understand what can be done with the many screen combinations, our 'DNA Model' do seriously complex out. Do know and note too that 'perfectly balanced chip types' may also be mixed along with screens on the stacks that are to be processed by our actions. Various combinations of different type of layers may be processed. The chip types and other images being on the screen stack will also be processed into the final produced 'Photo Screen' image or product.

Starting with just our Four Hole free basic action package you can and may make the highest professional quality and most unusual sound and beautiful photographic image types and masterpieces. Better, more exciting and more professional than any there are in the highest classed museums in all the world, or Solar System, or galaxy, or Universe, and we do challenge and we do deliver and we do prove it all and some more of what we claim or say.

One thought for consideration and evaluation about 'past' screens is that there have been in the past only one screen and this particular one screen is the same screen that is in or on your television or it is the same screen that is in or on your computer. Visualizing this screen of the past and what it looks like is not obvious but it is quite simple if or when you see it. The past screens are all similar to the wire screens on the windows of your house, similar a thin transparent type of web and there has been always only one basic type of screen.

Not so our Balanced DNA Screen Light Boxes, we have all the many different and various superior 'Prime Screen' types that are combinable and are evolvable and they do complex out creating and producing multitudes of seamless kinds and types of effects that have been impossible. We have and make the kind of screens that are not conventional or normal. Using our screens you can and may dynamically evolve beyond.

The Nine Hole Screen set is for purchase and it is a large set having 510 different screen combinations of easy make actions. The screens combination images you should make and save to folder, they are pre-titled for you. We do not break apart this action set package into smaller components for purchase. You will need the Nine Hole Screen combination package if you ever want to achieve to our Intermediate and Advanced 'Photo Screen' action set levels. Learn and master the 'free' Four Screen Hole Beginner Basic 'Photo Screen' set before you commit to purchasing our Advanced Nine Hole Screen combination package or our Nine Layer 'Photo Screen' package. Our actions are always easy to use and they do not flaw and we have advancements to the 'Master' level of imaging. you must and should learn and know the four screen layer color basics and manual manipulations well before advancing. We take you far beyond the 'PhD' levels should you learn well the basics and you want to go there.

All of the Prime Screens and all of the screen patterns that we make are built, constructed and developed from our copyrighted Perfectly Balanced Code Boards or Schematic Boards or Yin Yan Boards.
