

Creation Chip Actions

☆☆☆ PBM Cutters [Pair And Balance Master] ☆☆☆

Introduction

Creation Chips' PBM Cutter actions are unique, one of a kind, and the action set is complete. The actions are geometric design constructors and copyright producers. The actions produce every balanced geometric star point form or shape and it will also produce every star point form and shape from all and any drawn onto active selection outlines. The active selection outlines are drawn or made upon an abstract image or upon a photographic image or upon any opaque pixelated image by an active selection tool or by a command that will make the active selection outline. A geometric star point image form or a Shield is produced from the opaque pixelation selection that is contained inside of the active selection outline that is drawn.

Our PBM Cutters are a completed Master Set of image processing actions that does all the geometric calculations, equations and rotations that are necessary to build, construct and produce all the geometric star point forms from all and any opaque pixelation selections.

The PBM Cutter actions are our premier chip creators and they are of our most complex built actions. The actions are built to be most versatile. Though, the PBM Cutter actions are very easy and simple for anyone to use and they produce the highest professional-quality grade geometrical image designs that can be done or made. None of the produced geometrical image forms have ever been seen or viewed in The Universe before. Do realize also that this feat has never been accomplished by anyone since forever.

The versatile PBM Cutter actions has Beast selection in them. This means that the actions will process upon any drawn active selection outline. The actions will process upon all open original image files' whatever resolution and image size and they will not resize the open original image. The Cutter actions will process on the popular image document types such as 'Bitmap, JPEG, PNG and PSD'. All Bitmaps' and JPEGs' single layer must or should be unlocked before playing any particular action on them. The PBM Cutter actions will also process upon any selected layer. Our PBM Cutter actions will do many other functions than what we are spelling out here.

The Pair (Overhead View)

Skill Level
Beginner ☐ Intermediate ☒ Advanced ☐

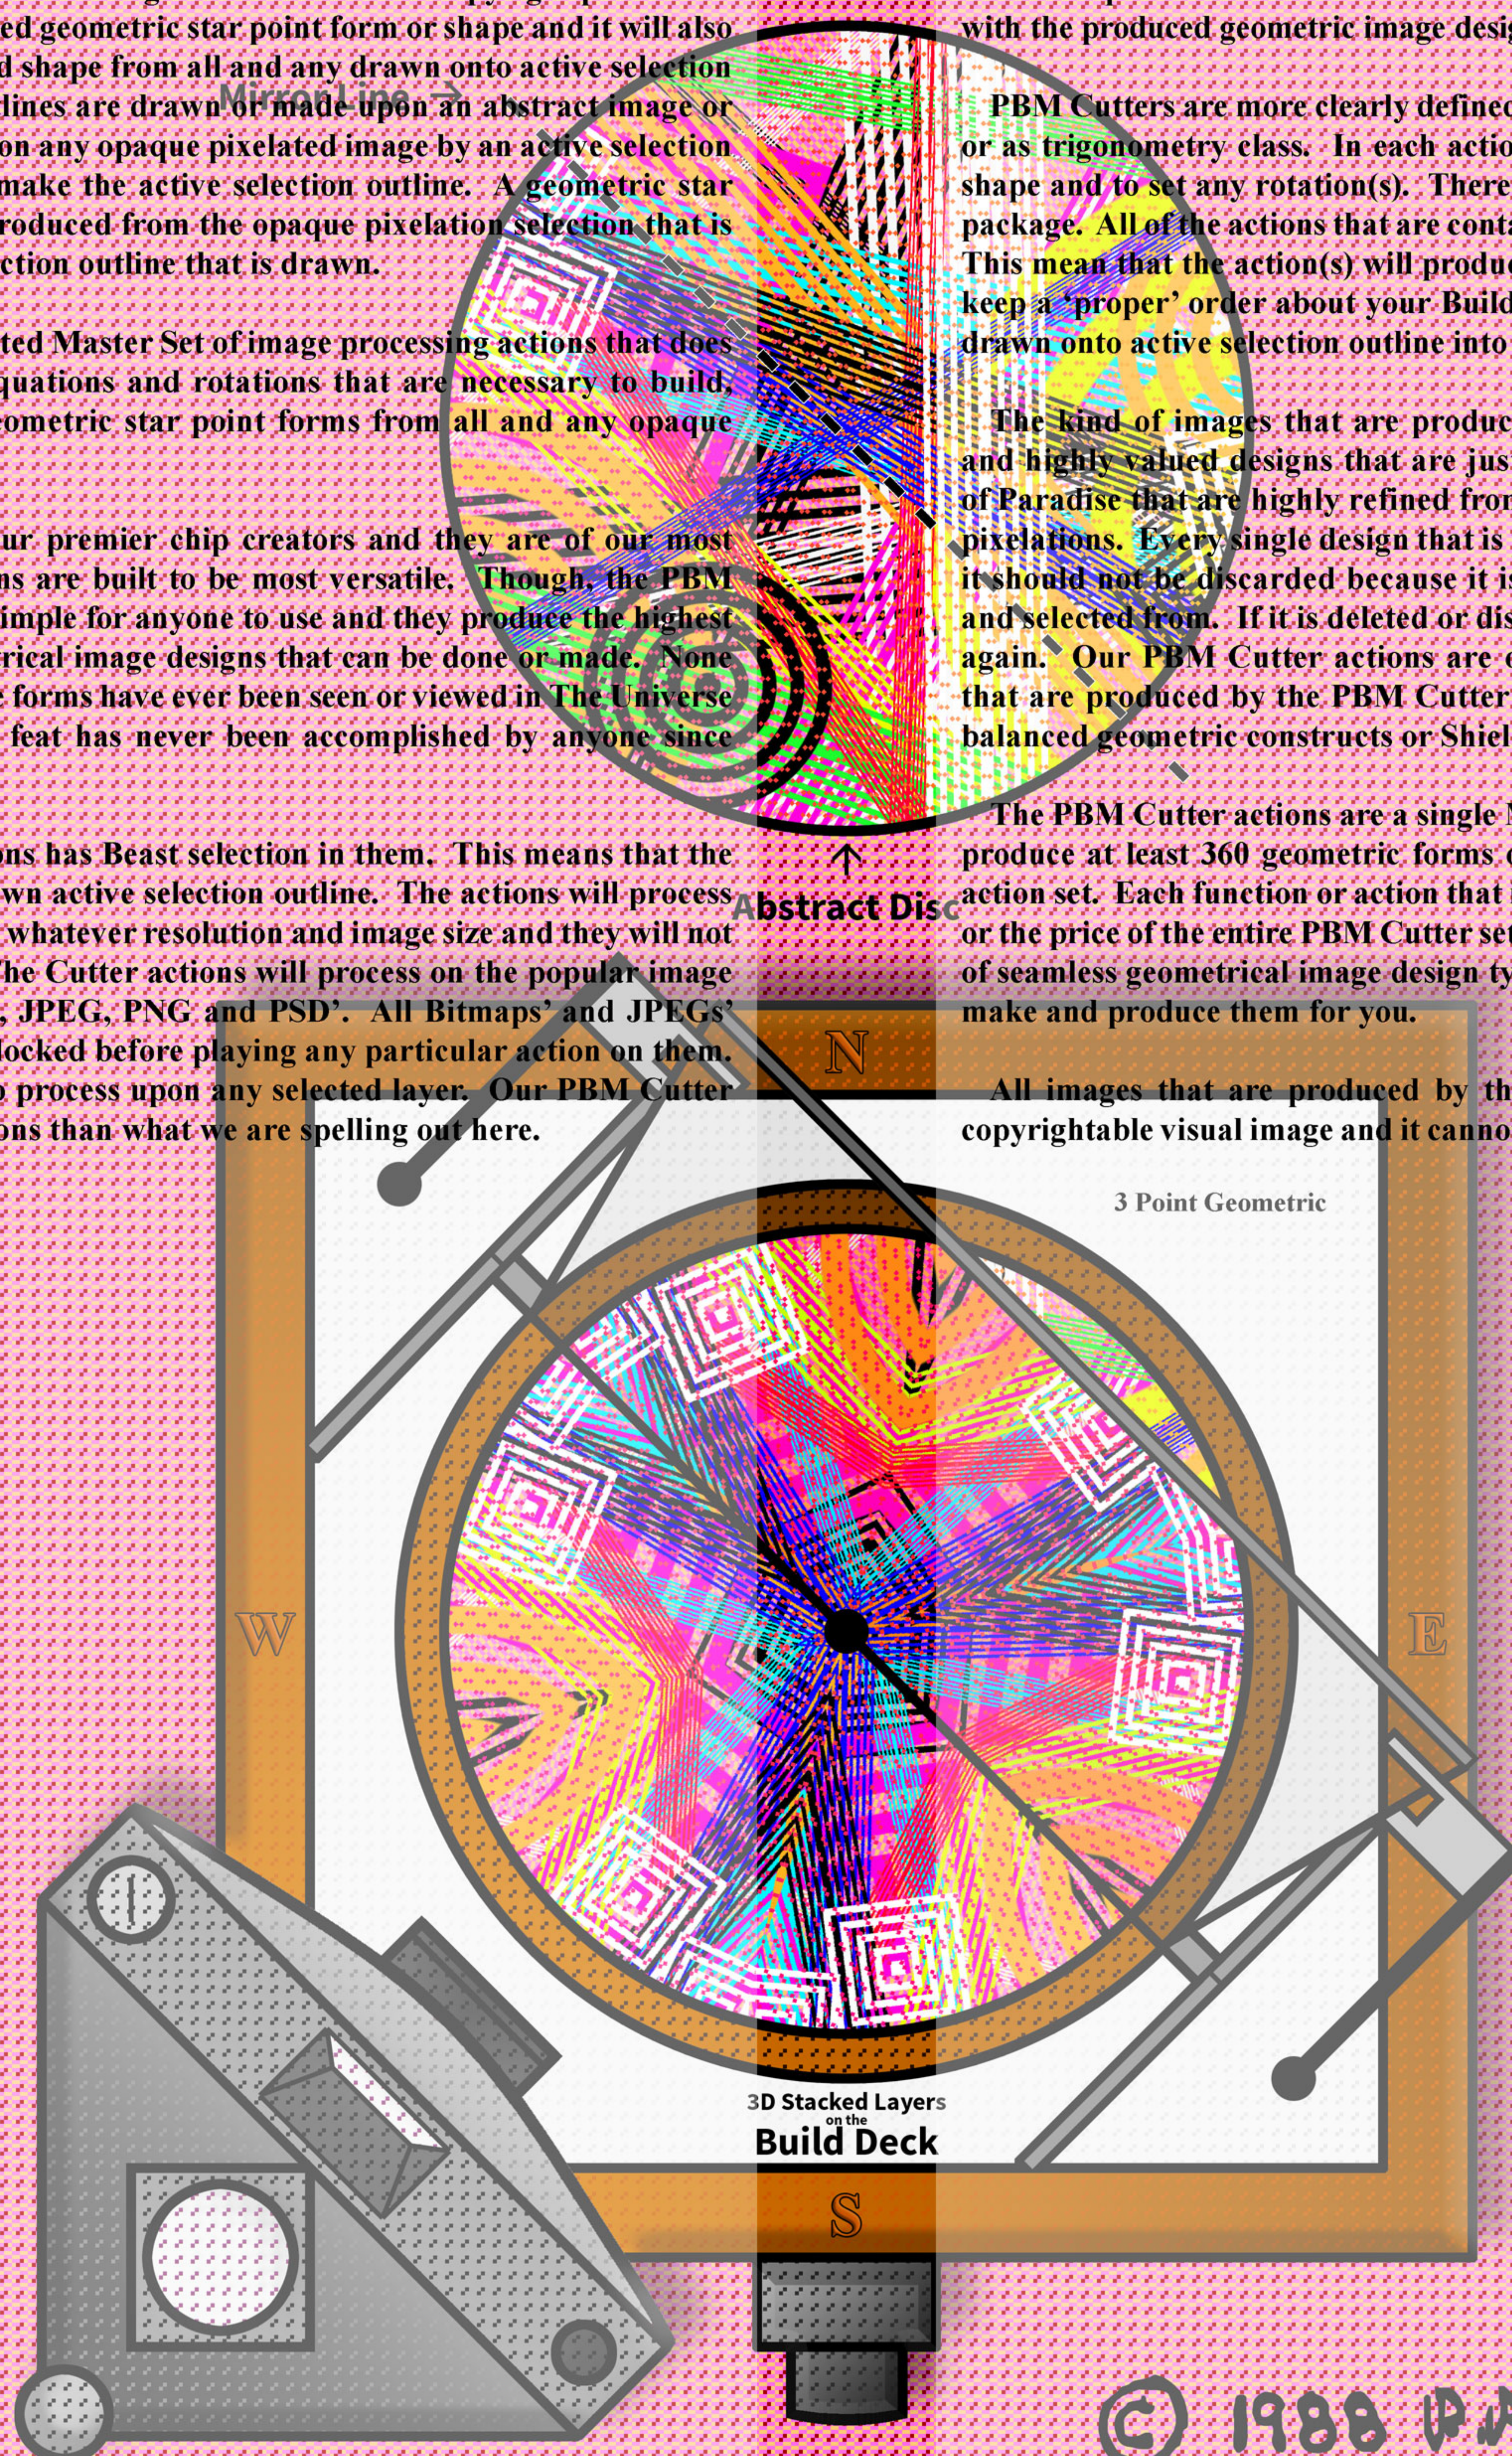

All images that are made or produced by the PBM Cutter actions will be done sized at 1x1 inch square 720 resolution. All of the actions will make a new untitled document file with the produced geometric image design on it.

PBM Cutters are more clearly defined and described as 'geometry and mathematics' or as trigonometry class. In each action is the lesson on how to build the angles and shape and to set any rotation(s). There are '360 actions' in the PBM Cutter action set package. All of the actions that are contained in the PBM Cutter set are [Make] actions. This mean that the action(s) will produce the products for you. You are responsible to keep a 'proper' order about your Build Deck and you are responsible for making the drawn onto active selection outline into the open images' News.

The kind of images that are produced by our PBM Cutter actions are very rare and highly valued designs that are just like preciously cut jewels or flowers or fruit of Paradise that are highly refined from raw complex abstraction or random opaque pixelations. Every single design that is produced by the Cutter actions is precious and it should not be discarded because it is unique and it can always be improved upon and selected from. If it is deleted or discarded or even lost then it will never be found again. Our PBM Cutter actions are of a great mastered construction. All images that are produced by the PBM Cutter actions will be at least 99.9 percent perfectly balanced geometric constructs or Shields.

The PBM Cutter actions are a single Master Set that has 360 different functions that produce at least 360 geometric forms or shapes, and there is no free package to the action set. Each function or action that is in the set, if sold separately, would be the cost or the price of the entire PBM Cutter set. It is almost impossible to produce these kinds of seamless geometrical image design types without having our PBM Cutter actions to make and produce them for you.

All images that are produced by the PBM Cutter actions is a unique and valid copyrightable visual image and it cannot be found anywhere else in the whole Universe.
